

Finding Your Version of Cyrious Control

This step will show you how to, 1) Find the Version number of your Control program, 2) Read the version number, and 3) Check if you already have the latest new update of Control.

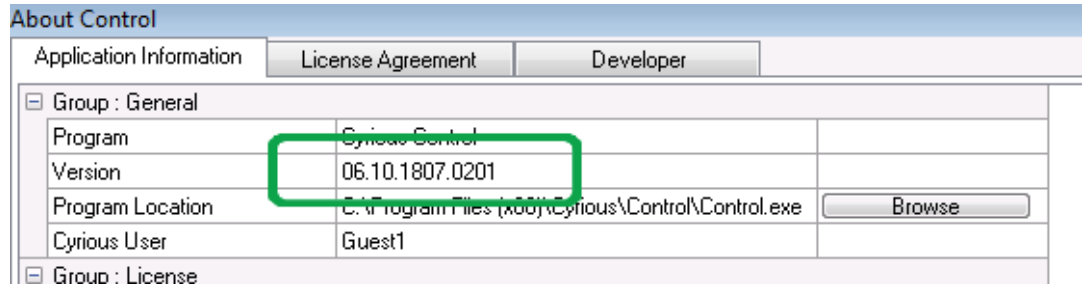

- 1) Find the version number of your Control program.
 - a) Go to the Cyrious Control Home Screen. Click on the **Help** button.
 - b) Click on **About Control**.

- c) On the **Application Information** tab on the About Control screen look for the **Version** number.
- d) Look at the version number; **are the first 4 digits 04.50 or greater?**
 1. If **NO**, this means your version of Control is 4.4 or earlier. Please call Tech Support (888-552-9823 or 225-752-2866) and schedule them to update your Control.
 2. If **YES**, you can download and update your Cyrious Control to the most current version. (Note: This is an update and will not remove any of your current information. Be sure to review the Instruction document before downloading the update.)

2) Read the Version number.

Look at the version number; in this example the number is [06.10.1807.0201](#).

Here is how you read the version number:

[06.10](#) Refers to the Cyrious Control Version

[1807](#) Refers to the Year/Month of the release in YYMM format.

[0201](#) Refers to the Day/release number that day in DD, 01-10 format.

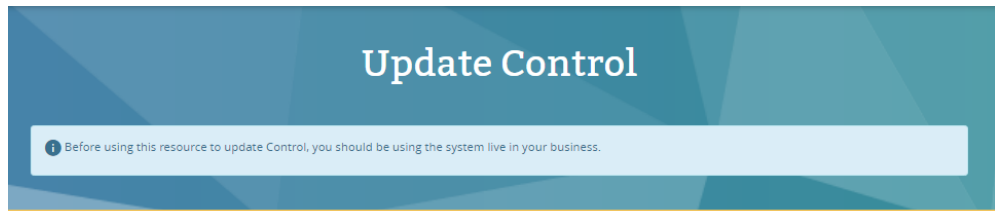

In this example,

6.10.1807.0201

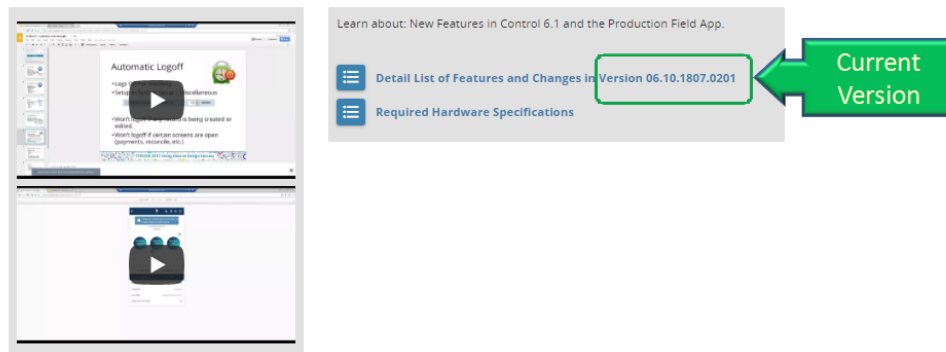

We are running the 01 compile of the July 02, 2018 release of version 06.10.

3) Check if you already have the latest new update of Control.

Compare your version number with the version number listed on the Update Control webpage.

What's in the latest version of Control?

How do you get the Control 6.1 Update? It depends on your version.

Do I have the most recent Control Update?

If **YES**, you do not have to update Control at this time, be sure to check the Update Control webpage in 2-4 weeks for future updates.

If **NO**, go to the next step which is the download ***Instructions*** on the Update Control webpage.
